

Hans-Dieter Alber

List of Publications

- [1] Die Greensche Funktion für ein periodisches Problem aus der Beugungstheorie. Methoden Verfahren Math. Phys. **16** (1976), 45–68.
- [2] Ein quasiperiodisches Randwertproblem für die Helmholtzsche Schwingungsgleichung bei verschiedenen Ausstrahlungsbedingungen. PhD thesis; TH Darmstadt 1976.
- [3]^{*)} A quasi-periodic boundary value problem for the Laplacian and the continuation of its resolvent. Proc. Roy. Soc. Edinburgh **82A** (1979), 251–272.
- [4] Estimates for the asymptotic behaviour of solutions of the Helmholtz equation, with an application to second order elliptic differential operators with variable coefficients. Math. Z. **167** (1979), 213–226. <http://dx.doi.org/10.1007/BF01174802>
- [4a] Erratum: Estimates for the asymptotic behavior of solutions of the Helmholtz equation, with an application to second order elliptic differential operators with variable coefficients. Math. Z. **209** (1992), 317–318. <http://dx.doi.org/10.1007/BF02570837>
- [5] Reflection of singularities of solutions to the wave equation and the leading singularity of the scattering kernel. Proc. Roy. Soc. Edinburgh **86A** (1980), 235–242.
- [6] Properties and global existence of solutions to some classes of quasi linear hyperbolic systems. Preprint No. 376, Sonderforschungsbereich 72, Universität Bonn 1980.
- [7] Justification of geometrical optics for non-convex obstacles. J. Math. Anal. Appl. **80** (1981), 372–386.
- [8] Zur Hochfrequenzasymptotik der Lösungen der Schwingungsgleichung — Verhalten auf Tangentialstrahlen. Habilitation thesis; Universität Bonn 1982.
- [9] Convergence of the first term of the geometrical optics approximation if higher order tangential rays exist. ZAMM **62** (1982), T271–T272.
- [10] Geometrische Optik, geometrische Theorie der Beugung und ihre geschichtliche Entwicklung. Preprint Nr. 10 (Vorlesungsreihe), Sonderforschungsbereich 72, Universität Bonn 1982.
- [11] An iteration procedure for the solution of free space problems to elliptic and hyperbolic equations using Neumann series. Preprint Nr. 557, Sonderforschungsbereich 72, Universität Bonn 1982.
- [12] Convergence of geometrical optics approximations if tangential rays of higher order are present. In: G.F. Roach (Editor), University of Strathclyde Seminars in Applied Mathematical Analysis/Vibration Theory. Shiva, Nantwich 1982, 157–165.

^{*)}This paper is based in essential parts on the results of [2].

- [13] Parametrics, singularities and high frequency asymptotics in the theory of sound waves. In: P. Filippi (Editor): Theoretical acoustics and numerical techniques, CISM courses and lectures No. 277. Springer, Wien, New York 1983, 265–290.
- [14]**) Highfrequency asymptotics of the field scattered by an obstacle near tangential rays. *J. Reine Angew. Math.* **345** (1983), 39–62.
- [15] Numerical computation of waves at high frequencies by an iterated WKB method. *Math. Meth. in the Appl. Sci.* **6** (1984), 520–526.
- [16] Iteration procedures for the calculation of wave propagation in anisotropic, inhomogeneous media. *ZAMM* **64** (1984), T347–T349.
- [17] Calculation of wave propagation by the WKB-method. In: G.F. Roach (ed): University of Strathclyde Seminars in Applied Mathematical Analysis: Classical Scattering. Shiva, Nantwich 1984, 13–22.
- [18] A local existence theorem for the quasilinear wave equation with initial values of bounded variation. In: B.D. Sleeman, J.R. Jarvis (Editors): Ordinary and partial differential equations. Proceedings Dundee 1984, Lecture Notes in Mathematics 1151. Springer, Berlin 1985, 9–24. <http://dx.doi.org/10.1007/BFb0074710>
- [19] Local existence of weak solutions to the quasilinear wave equation for large initial values. *Math. Z.* **190** (1985), 249–276. <http://dx.doi.org/10.1007/BF01160462>
- [20] (with A.G. Ramm): Scattering amplitude and the inverse scattering problem for a class of non-convex obstacles. *Physics letters* **108A** (1985), 238–240.
- [21] (with A.G. Ramm): Inverse scattering: asymptotic analysis. Letter to the editor, *Inverse Problems* **2** (1986), L43 – L46.
- [22] (with A.G. Ramm): Scattering amplitude and algorithm for solving the inverse scattering problem for a class of non-convex obstacles. *J. Math. Anal. Appl.* **117** (1986), 570–597.
- [23] Untersuchung von Gleichungen der mathematischen Physik mit der Methode der geometrischen Optik am Beispiel der konischen Refraktion. *ZAMM* **68** (1988), T5–T12. <http://dx.doi.org/10.1002/zamm.19880680402>
- [24] On the existence in the large of solutions to the one-dimensional, isentropic hydrodynamic equations in a bounded domain. In: S. Hildebrandt, R. Leis (Editors): Partial Differential Equations and Calculus of Variations, Lecture Notes in Mathematics **1357**. Springer, Berlin 1988, 1–22. <http://dx.doi.org/10.1007/BFb0082860>
- [25] (with R. Leis): Initial-boundary value and scattering problems in mathematical physics. In: S. Hildebrandt, R. Leis [eds.]: Partial Differential Equations and Calculus of Variations, Lecture Notes in Mathematics **1357**. Springer, Berlin 1988, 23–60. <http://dx.doi.org/10.1007/BFb0082861>

**) This paper is based in essential parts on the results of [8].

- [26] Global existence and large time behaviour of solutions for the equations of nonisotropic gas dynamics to initial values with unbounded support. Preprint, Sonderforschungsbereich 256 der Universität Bonn **15**, 1988.
- [27] On a system of equations from the theory of nonlinear visco-plasticity. Preprint, Fachbereich Mathematik, Technische Hochschule Darmstadt **1265**, October 1989.
- [28] (with J. Cooper): Quasilinear 2×2 systems with a free, damping boundary condition. J. Reine Angew. Math. **406** (1990), 10–43.
